

Stornoway Asset Services  
Quarrying.

Stornoway has been part of the Australian business community since 1976. We deliver asset services nationally and internationally to government, industrial and commercial customers.

- Supply of high quality construction materials, industrial sand and decorative stone
- Road asset management and maintenance services
- Design, build, operation and maintenance of water and wastewater treatment systems

*helping our customers  
draw long-term value  
from their assets.*

# a specialist provider of construction and industrial quarry materials.

Back in 1976, Stornoway started as a small gravel supplier. Today, our operations have expanded considerably and we've developed a level of knowledge and skill that places us as one of Tasmania's leading quarry operators.

We now operate a number of quarries throughout Tasmania, supplying government, industrial and commercial customers with materials for civil and building construction projects, as well as helping them meet a diversity of infrastructure maintenance requirements.

And with specialised crushing and screening capability and an experienced team, Stornoway can create products required to meet particular engineering or project specifications.

# quarry product range.

- Screened and crushed gravel
- Crushed blue metal
- Concrete aggregate
- Oversize rock
- Crusher dust
- Industrial sand
- Decorative stone

Stornoway produces specialised sand that has been washed, dried and graded for a range of commercial and industrial applications including:

- Filtration systems (pools, fish tanks or commercial filtration)
- Landscaping and building
- Rendering, tiling and epoxy flooring
- Potting mix substrate
- Foundry casting
- Outdoor and sporting applications like bowling greens, tennis courts, golf course bunkers or a child's sandpit

# quarry management services.

Stornoway can provide a full range of quarry development and operating services including:

- [Development planning and environmental approvals](#)
- [Production management and product quality control](#)
- [Blasting, crushing and screening](#)
- [Site safety management and environmental control](#)

And it's not just about supplying a product. We know an entire project can be derailed if the right material isn't used or the right material isn't used correctly.

Our approach is to work with our customers to ensure they have the right material to start with and then provide any technical support they need to use it to achieve the best long-term outcome.
