

Stornoway Asset Services
Roads.

Stornoway has been part of the Australian business community since 1976. We deliver asset services nationally and internationally to government, industrial and commercial customers.

- Road asset management and maintenance services
- Design, build, operation and maintenance of water and wastewater treatment systems
- Supply of high quality construction materials, industrial sand and decorative stone

*helping our customers
draw long-term value
from their assets.*

a specialist provider of asset management and maintenance solutions.

Much of Stornoway's history is built around roads, starting back in 1983 with an upgrade of one of Tasmania's major highways.

Today, managing and maintaining roads and assets is a complex business, with ageing infrastructure, rising community expectations, funding and budget pressures, and competing priorities.

Stornoway has developed a level of knowledge and expertise that positions us as a leading supplier of road asset management and maintenance services, with particular expertise in rural and regional road networks.

Our Road Operations team has decades of experience in road maintenance, supported by a focus on continual improvement, innovative work practices and investment in new technology.

Our goal is to use our experience and expertise to help our customers get better value from their expenditure and to best manage their road assets in line with their asset management objectives.

asset maintenance.

Stornoway has been in the business of designing, building, operating and maintaining civil infrastructure for almost 40 years.

We've learnt a great deal about how to do this in an efficient and cost effective way, helping to deliver long-term value for our customers.

Maintenance services for roads, bridges, footpaths, public spaces and more

- Pavement repair for sealed and unsealed roads
- Road resealing preparations
- Road grading
- Vegetation management (slashing and mowing)
- Rest area and road furniture maintenance
- Drainage maintenance and street cleaning
- Bridge inspection and maintenance
- Line marking
- Litter collection

Improving streetscapes and safety

- Landslip assessment and repair
- Rockfall control
- Specialised pavement and path surfacing

asset management.

Asset owners are increasingly focused on cost efficiency and long-term value. It is now more critical than ever to make informed capital and maintenance expenditure decisions based on an understanding of asset performance objectives, present state and condition, deterioration drivers, major risks and likely spending benefit.

Stornoway's vision is to work with our customers to help achieve this understanding.

Through working with government, commercial and industrial customers, we've learnt a great deal about how to provide better assistance, no matter what the asset challenge.

- [Advice on asset classification and service level establishment](#)
- [Design of data collection methodologies](#)
- [Collection of asset condition data for road pavements, footpaths, signs, safety fences, drains, lighting, landscaped areas and more](#)
- [Data analysis and modelling](#)
- [Works program development](#)
- [Works project management and delivery](#)
- [Asset management performance reporting](#)

And we are continually seeking out innovation and improved work practices that build on this.
