

Stornoway was built on dedication, passion and determination...and that's what keeps driving us almost 40 years later.

What started as a small gravel supply business in Tasmania has grown into a national company delivering asset services to government, industrial and commercial customers.

Our operations include the development, management and maintenance of road and water infrastructure nationally, and the supply of a diversified range of quarry products from sites across Tasmania.

- Design, build, operation and maintenance of water and wastewater treatment systems
- Road asset management and maintenance services
- Supply of high quality construction materials, industrial sand and decorative stone

*helping our customers
draw long-term value
from their assets.*

rethinking asset services.

We've recognised that the best thing we can do for our customers is to help ensure they gain long-term value from the infrastructure investments they make.

So it's not just about what assets you have, it's about how they are managed and maintained to best effect. That means striving for optimum life, reduced risk and lower costs.

And for Stornoway, we look beyond just providing a service to our customers. We want to work with them to build a productive partnership.

our water operations.

Stornoway offers a complete solution - we design, build, operate and maintain decentralised water and wastewater treatment systems.

Our experience and expertise covers water recycling and drinking water systems for populations ranging from 100 to 2000 people, as well as for groundwater treatment, industrial wastewater management and stormwater harvesting.

We've designed and installed over 40 water and wastewater treatment plants across Australia and in South-East Asia for commercial customers, state and federal government and the resources sector.

And Stornoway's on-the-ground experience in delivering plant operating services has helped us develop a range of specialist operations and maintenance packages.

Stornoway is now working with customers nationally to deliver plant operations and maintenance services, with an experienced team who understand our own plants and those from other suppliers.

our road operations.

Much of Stornoway's history is built around roads and we have developed significant expertise in road network maintenance and asset management.

We've seen that when it comes to assets, a reactive approach and lack of regular maintenance can very quickly cause issues and potentially, asset failure.

Our goal is to use our experience and expertise to help our customers get better value from their expenditure and to best manage their infrastructure and assets to maximise life and value.

Stornoway's team delivers a range of services including network inspection, asset life cycle modelling, works planning and programming, as well as works delivery covering routine maintenance, minor capital works and emergency response.

We've also built expertise in specialised surfacing products, rockfall control and traffic management and own a range of specialist equipment for grading, line marking, street sweeping and drainage maintenance.

our quarrying operations.

Stornoway began as a small gravel supplier in 1976. Since that time, we have developed our knowledge and skill to become one of Tasmania's leading quarry operators.

We have an extensive range of quarry products which can be used for projects ranging from building construction and foundations to road building and resurfacing.

Stornoway has specialised crushing and screening capability, allowing us to create products to meet particular specifications.

We can also assist in quarry and production management, and quarry development planning.

We produce specialised sand for a variety of commercial and industrial applications and supply decorative stone for landscaping uses.

Our approach is to ensure our customers have the right material and provide any technical support they need to use it correctly.
